Cristiano Noga

Backend & Data Systems Engineer

✉ hi.chrisn@gmail.com 📍 Curitiba, PR, Brazil 🌐 https://hello-chrisn.netlify.app GitHub LinkedIn

Summary

Backend and Data Systems Engineer with a degree in ADS and practical experience building ETL pipelines, backend architectures, and data-driven systems. Skilled in Python, TypeScript, Node.js, and SQL, focusing on clean code, Linux environments, and rigorous problem-solving.

Experience

Freelance / Self-Employed Curitiba, PR (Remote)
Backend Developer Sep 2023 – Present

- Designed and delivered backend architectures, data pipelines, and REST APIs using Python, TypeScript, and Node.js.
- Built and deployed web solutions and interactive tools for non-profit community initiatives and animal welfare projects.
- Implemented Clean Architecture, Domain-Driven Design (DDD), and Hexagonal Architecture principles in distributed microservices.
- Developed automated ETL pipelines integrating web scraping, external APIs, and relational storage.

Xerox Curitiba, PR
IT Operations & Support Technician 2022 – 2023

- Managed corporate IT infrastructure, resolved critical system incidents, and maintained high availability for enterprise hardware/software environments.
- Handled incident lifecycle tracking, asset management, and ensured seamless technology operations for end-users in high-demand corporate settings.
- Applied structured troubleshooting methodologies to diagnose network, OS, and hardware bottlenecks.

Stefanini Brasil Curitiba, PR
IT Support Technician 2022

- Handled infrastructure incident management and software troubleshooting using enterprise ticketing frameworks (ServiceNow).
- Participated in corporate IT migration, software deployment, and system upgrade processes, ensuring minimal downtime during operational transitions.
- Collaborated with teams to maintain stability and resolve hardware/software issues across corporate desktop environments.

Projects

Horrorverse — Backend Data Pipeline System
Python · Node.js · SQLite · RabbitMQ · Docker · Linux

- Built an end-to-end data pipeline to harvest, clean, and enrich filmography data from public sources using Python.
- Designed a SQLite relational database as the core source of truth and integrated asynchronous task processing via RabbitMQ and Python workers.
- Developed a clean REST API using Node.js (Express) to serve processed rankings and data queries efficiently.

Curse Sanity Oracle — Clean Architecture & DDD
TypeScript/JavaScript · DDD · Hexagonal Architecture

- Designed a backend exploration focused on decoupling business logic from external frameworks, implementing Domain-Driven Design (DDD), Entities, and Ports & Adapters.

Education

Centro Universitário UniOpet Associate Degree
Systems Analysis and Development (ADS) Curitiba, PR • Jan 2021 – Nov 2023
• Coursework: Software Engineering, Data Structures, Relational Databases, System Architecture, and Object-Oriented Programming.

Skills

Backend & Architecture
Node.js, Express, Domain-Driven Design (DDD), Hexagonal Architecture, REST, APIs

Data & Pipelines
Python, Pandas, SQLite, SQL, ETL Workflows, Web Scraping

Foundations & Tooling
Data Structures & Algorithms (DSA), C, Linux, Bash, Git, Docker, RabbitMQ
